Most drawings in AutoCAD have multiple drawing elements. If you press the command key and select a drawing element, it will produce a box around the drawing element and highlight it in the drawing area. You can also select the drawing element from the View menu or press the Spacebar while you are using the default workspace. In this example we will use the Drawing Elements button on the status bar and the default workspace in AutoCAD. We will create a new drawing element. Type AL in the command line and press Enter. You will be prompted to select a drawing element. Select the DrawingElements button and pick DrawingElement1. In a new drawing, select the Rectangle tool and draw the rectangle indicated in the image below. To help you select the size of the rectangle, press the Shift key when you are selecting the first point. Type 1 in the command line and press Enter. You will be prompted to enter a first point and a second point. Move the cursor around the screen until the rectangle looks like the image below. Now type 3 in the command line and press Enter.
